

Onsite Data Erasure: The BEST Option.

Data destruction is the most critical step in IT asset retirement.
Certified Onsite Data Erasure is the top recommendation for the following reasons:

- Most Secure Option**
You have complete visibility of your data bearing devices. No data leaves your facility.
- Certified Data Erasure Software**
Qualified ITAD providers use certified data erasure software along with proven and standardized processes.
- Federal & State Regulations**
Onsite data sanitation following approved and certified processes meet standards required by law.

Onsite Considerations

Costs

Onsite data sanitation is more expensive than offsite data sanitation.

Limited Qualified Providers

Most ITAD (or pseudo-ITAD) providers do not offer certified onsite data sanitation.
